

WORKSHOP BRIEF INTRODUCTION TO HTML / CSS

Using the basic rules of HTML and CSS, create the following three layouts.

INSTRUCTIONS

Write your HTML using semantic HTML5 tags such as <header>, <main>, <footer>, etc.

Apply your styles using an external CSS file.

Practice structure and style together:

Build a simple page skeleton with semantic tags.

Add text and placeholder content to define sections.

Style these sections with CSS properties (colors, borders, spacing, fonts).

Duplicate the layout three times and add content according to content.txt.

Customize each layout with your own suggestions.

DELIVERABLE

Three HTML files containing the three layouts.

Each layout must demonstrate correct use of semantic tags and basic CSS styling.
